

Plastic 19" rack cases

Front and rear lids with latches and IP65 seals

Recessed latches and handles for durability and security

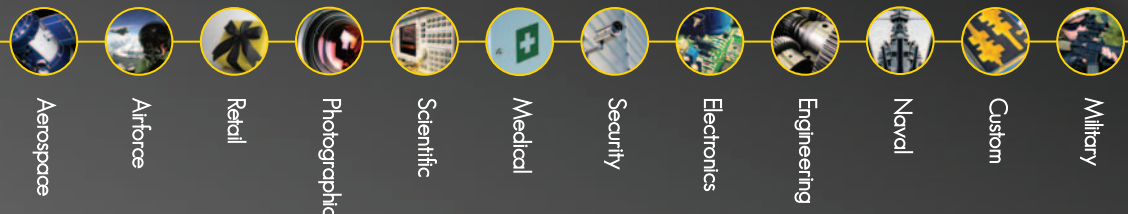

Extra wall thickness around the corners for increased protection

19" inner frame for fitting equipment

Key Features

- Roto moulded outer construction
- Access lids front and rear
- 19" Shock mounted frame
- Sealed to IP65
- Automatic pressure relief valve - PRV
- Range of options

Plastic 19"

rack cases

Rotationally moulded polyethylene enclosures with front and rear access lids, fitted with 19" shock mounted frames to give protection from mechanical stresses including shock, impact and vibrations.

Standard frame depths are 480mm and 610mm, but many others can be supplied as required.

They are resistant to most chemicals and solvents and are integrally coloured to give resistance to chipping and fading.

Handles, turnfasteners, automatic pressure relief valves and humidity indicators are all recessed within the container walls for improved protection.

Lids are fitted with a sealing gasket and can be either hinged or removable. Cable pouches can be included if required.

Frame support rails, telescopic drawers and platforms can be supplied and fitted.
